

## Email Settings:

Email ends in @cstel.net or @comsouth.net

Checking Web Based Email:

<http://webmail.cstel.net>

<http://webmail.comsouth.net>

Type POP3	Ports (Standard)	@cstel.net	@comsouth.net
Incoming (POP)	110	mail.cstel.net	mail.comsouth.net
Outgoing (SMTP)	25 or 587	smtp.cstel.net	smtp.comsouth.net
Check the BOX (Not SSL)	Important >>>	My Outgoing Server Requires Authentication	My Outgoing Server Requires Authentication

**Note:** @comsouth.net or @cstel.net Email addresses are POP3 accounts, they are not meant to be checked from multiple devices. This is the reason that all of these mobile devices have templates in them for free Email providers such as gmail which is an IMAP account, designed to be used on multiple devices. The IMAP accounts also connect using an SSL connection; this is much like going to a secure web site to do your banking transactions and such. The POP3 accounts connect using "Clear Text Password", meaning anyone monitoring your actions on a public WiFi can see your password.

**Our Glitch Guys offers the service to setup and explain the use of Email on many different platforms and devices. We offer these services at a very competitive rate.**
